

CELL SITE SIMULATOR?

**Cell site simulator (CSS),
or MSI catchers or Stingrays,
is a form of mass surveillance
that works by exploiting
network security of cell phones
and other electronic devices.**

NO

NO

NO

**They are used by law enforcement (and criminals) to
access communications and private data of the public.**

**You know how there's things that you wouldn't want even if
they were free? Cell site simulator is one of them.**
